

## **WORKSHOP ON MICRO SCALE ANALYSIS ON 25/3/2019**

Micro scale chemistry is an analytical method and also a teaching method widely used at school and at university levels, working with small quantities of chemical substances. Since only very small quantities of sample, solvent and reagent are utilised the method produces less waste and is more cost effective as compared to macro techniques. In order to conduct Micro scale analysis, the department organised a one day workshop on 'Micro scale analysis' on 25/3/2019. Dr. S. Murugan handled the session. All the students actively participated in the workshop. 132 students participated in the workshop.
