

Analysis of Student Survey 2017-18

The student survey was conducted via online mode using an app designed by TechnoRip solution through the library and knowledge centre website. But unfortunately, the server which hosted the details of the feedback was lost in the flood of August, 2018. The real survey feedback data collected in March, 2018 and the feedback analysis report are lost and another feedback was taken from the existing batches through Google form platform later. On the basis of the feedback, the following analysis is made.

1. Students are generally satisfied with the facilities of the college and its facilities, teaching learning process and other resources.
2. More resources are to be added in the library including the books and journals.
3. More support should be given to students as part of mentoring by the teachers.
4. The help of a professional psychologist is felt relevant to deal with the problems of students.
5. More orientation programmes are organised to motivate the students to pursue higher education and placements.
6. Placement drives are to be organised in the college to increase the placements of students which is a very serious issue of concern.
7. The number and frequency of extra-curricular activities are required to be increased as much as possible.
8. Students are to be provided with career orientation and civil service orientation programmes as requested by the students.
